

Amendments to the Claims

Please replace the pending claims with the following:

Claims 1-3. (Canceled)

Claim 4. (New) A vehicle sun visor in which an extendable plate is mounted within a sun visor body such that the extendable plate can be drawn out of the sun visor body in a drawing direction, the sun visor comprising:

- a removal-preventing member protruding in an inclined configuration and formed on a side surface of the extendable plate, said removal-preventing member having a tip end portion;

- a removal-preventing recess formed within the sun visor body for engaging said tip end portion so as to inhibit the further movement of the extendable plate in the drawing direction;
- and

- a recess wall surface on one side of the removal-preventing recess and forming an inclined surface for guiding said tip end portion of the removal-preventing member toward a wedging direction into the removal-preventing recess.

Claim 5. (New) The vehicle sun visor according to claim 4, further comprising:

- a first shell;

- a second shell;

- wherein the first shell is joined to the second shell and defines a storage space between the first shell and the second shell;

- wherein the storage space includes an inlet/outlet corresponding to the extendable plate;

- a stopper member disposed to protrude from an inner wall surface of one of the first shell or the second shell and including the recess wall surface;

- wherein the removal preventing recess is formed at a position proximate to the inlet/outlet by the stopper member in cooperation with the inner wall surface.

Claim 6. (New) The vehicle sun visor according to claim 5, wherein:

- the removal preventing member is formed as an elongated member along a widthwise direction of the side surface of the extendable plate.

Claim 7. (New) The vehicle sun visor according to claim 4, wherein:

the removal preventing member is formed as an elongated member along a widthwise direction of the side surface of the extendable plate.

Claim 8. (New) The vehicle sun visor according to claim 5, wherein:

the first shell is hingedly connected to the second shell along a peripheral edge thereof.

Claim 9. (New) A vehicle sun visor comprising;

an extendable plate;

a visor body;

wherein the extendable plate is slidably movable within the visor body between a first position and a second position;

a first removal-preventing member;

a second removal-preventing member;

a recess wall surface formed by one of the first removal-preventing member or the second removal-preventing member;

wherein the extendable plate includes one of the first removal-preventing member or the second removal-preventing member;

wherein the visor body includes the other of the first removal-preventing member or the second removal-preventing member;

wherein a tip of one of the first removal-preventing member or the second removal-preventing member engages the recess wall surface when the extendable plate is in the second position.

Claim 10. (New) The vehicle sun visor of claim 9 including:

a first visor body half;

a second visor body half;

wherein joining the first visor body half to the second visor body half forms the visor body;

wherein the extendable plate fits between the first visor body half and the second visor body half;

wherein the other of the first removal-preventing member or the second removal-preventing member is included in one of the first visor body half or the second visor body half.

Claim 11. (New) The vehicle sun visor as in claim 10, wherein:

the first visor body half is hingedly connected to the second visor body half.

Claim 12. (New) A vehicle sun visor comprising;

an extendable plate;

a visor body;

wherein the extendable plate is slidably movable along a lengthwise direction relative to and within the visor body between a first position and a second position;

a first protruding member orthogonal to the lengthwise direction;

a second protruding member orthogonal to the lengthwise direction;

wherein one of the first protruding member or the second protruding member is integrated with an inner wall surface of the visor body;

a removal-preventing recess formed by the one of the first protruding member or the second protruding member and the inner wall surface of the visor body;

wherein an other of the first protruding member or the second protruding member is integrated with a surface of the extendable plate;

wherein a tip of the other of the first protruding member or the second protruding member is inserted into the removal-preventing recess when the extendable plate is in the second position.
